

Spring Nature Programs

DPNC is looking forward to visiting your library this spring! Our engaging and knowledgeable Nature Center educators deliver interactive, nature-inspired programs specifically for a library audience. Owls, snakes, turtles, and frogs are just a few of the animals available to come meet your library patrons!

We work with all ages, interests, and abilities and can tailor each of our programs to best suit your needs.

Programs listed on the reverse are a sampling of our nature-focused library programs; please contact us about other program topics of interest.

TAILS & TALES
NATURE'S SOUNDTRACK
EGG-CELLENT ARRIVALS
SIGNS OF SPRING
EARTH'S RECYCLERS

COST: \$160 (additional travel fees may apply)

LENGTH: 45-60 Minutes

Programs can take place inside, outside, or online.

Decomposers

Who runs the world? Decomposers! Discover the world of decomposers both big and small. Learn about what happens to make the cycle of life go around and around. Decomposers help to reuse and recycle the energy that helps support life all around them. Meet some live animal decomposers and learn about their important job.

Baby Animals & Eggs

The spring is an egg-cellent time of year to see lots of animal babies in the wild! We will discover how some baby animals hatch from eggs, as well as some babies look nothing like their parents. Discover the adorable world of baby animals and learn what makes each of them different.

Animal Sounds

Caw! Growl! Chirp! Ribbit! If you go outside and just listen to nature, you will hear many different animal sounds. Hear some animal sounds and learn about why they make the sounds they do. Meet some live animals to learn more about what sounds they make.

Animal Tails

Heads or tails? Tails! Many animals have tails and these tails come in all sorts of shapes and sizes. Tails have many different functions and are adapted to help the animal with their day to day life. Meet live animals and learn about how they use their tails.

Return of Spring

Knock Knock, who's there? Spring time! Learn about the signs of spring and how nature knows it is time to regrow after the long winter months. Discover all the plants and animals that return once spring has sprung. Meet some animals that you might see enjoying the spring weather.
